Prompt Injection Evaluation

A presentation-ready summary of navigation compliance, attack success, and per-pattern response behavior.

Total tests

400

Normal compliance

100%

Attack success

84%

Executive Snapshot

- Most robust pattern: A3 Template Escape (61%)
- Highest-risk pattern: A1 Direct Override (99%)
- Normal prompts measure compliance with the intended destination.
- Injection prompts measure whether the robot can be redirected to zone B.

400

Normal compliance

100%

Overall attack success

84%

Weakest pattern

A1 Direct Override (99%)

Key Takeaways

- Strongest resistance pattern: A3 Template Escape (61%)
- Highest-risk pattern: A1 Direct Override (99%)
- Normal prompts are measured by expected-match rate; injection prompts are measured by attack success rate.
- Negative linear x indicates the robot was redirected toward zone B during the attack sequence.

Group Summary

Group	Attempts	Positive	Rate	Mean linear.x
Normal	100	100	100%	0.500
A1 Direct Override	100	99	99%	-0.495
A2 Newline Override	100	93	93%	-0.455
A3 Template Escape	100	61	61%	-0.185
